

Press release

Avon, February 11th, 2014 – Geovariances launches Isatis Vario Pack

Geovariances announces the launching of **Isatis Vario Pack**, a new package of **Isatis**, its comprehensive software solution for geostatistics.

Isatis Vario Pack is meant for resource estimation professionals, exploration or mine geologists who wish to go deeper in data or domain analysis and to gain efficiency in variogram modeling.

Two premium features of **Isatis** are available in **Isatis Vario Pack**:

- Its powerful **Exploratory Data Analysis** tool allowing data clean-up and spatial analysis through interactive and linked-together base maps, histograms, experimental variograms and other statistical representations;
- Its unique **variogram autofitting** tool which is the only one that handles complex variography and allows quick and high-quality fitting of multivariate, multi-directional and multi-structure variograms. Combined with **Isatis batch procedures** for task automation, it allows the set-up of efficient workflows for the quick delivery of models adjusted at best.

Isatis Vario Pack also provides tools for the detailed analysis of the **transition between geological domains**. Resulting from four years of research involving Mines ParisTech Geostatistics Group and several major mining companies, these tools, unique on the marketplace, help characterize the relationships between domains and grades and analyze the grade behavior at the contact between two domains.

Isatis Vario Pack is offered at a very cost-effective price with a competitive software maintenance agreement.

"Because of its exceptional cost (Isatis Vario Pack is offered at EUR7,200 until 31 March 2014 for a dongle-based license), Isatis Vario Pack is a primary offer available to a wide public and facilitates the move to Isatis advanced modeling and simulation tools whenever they need them." says Jean-Paul Roux, Geovariances Sales Manager. *"Even more, it allows customers to increase their Isatis licenses portfolio in a smooth way."*

About Geovariances and Isatis

Geovariances is a leading provider of advanced geostatistical solutions. The company offers the most complete solution in geostatistics: innovative methodologies, experts and software packages to answer its customers' challenges in mapping, resource evaluation, volumetric estimation, risk analysis.

Geovariances primary sector of expertise is Mining. The company also works for the Oil & Gas industry and the Environmental field for natural resource evaluation and contamination mapping.

The company develops and sells Isatis, the benchmark software solution for mining geostatistics. For more than 20 years, Isatis has been helping mining companies around the world to improve their resource estimation and risk assessment activities.
